Management for Engineers, Technologists and Scientists

About this Publication:

This updated third edition of Management for Engineers, Technologists and Scientists is an introductory-level management textbook written specifically for those studying and working in an engineering discipline. It will be an invaluable tool for the existing or aspirant engineer and engineering manager. The text introduces the reader to management and related issues (for example law and economics), which are essential when dealing with customers, suppliers, contractors, accountants, lawyers, economists and managers, either inside or outside an organisation. This new edition has been substantially revised; it includes a new chapter on engineering ethics and professionalism as well as a workbook on CD.

Contents Include:

Chapter 1: The Environment in which Technical People Work (Wilhelm Nel)
1.1 The engineer, technologist and scientist defined
1.2 The role of engineers in society
1.3 Engineering skills and knowledge
1.4 Engineers as (project) managers, executives and supervisors
1.5 The organisational and other life cycles
1.6 Characteristics of the environment in which engineers work
1.7 Conclusion
1.8 The way forward

Chapter 2: Principles of General Management (Jannie Lourens)
2.1 Management
2.2 The planning function
2.3 The organising function
2.4 The controlling function
Chapter 3: Human Resource Management (Marius Meyer)
3.1 Introduction
3.2 Human resource planning
3.3 Recruitment
3.4 Selection
3.5 Training and development
3.6 Performance management
3.7 Conclusion

Chapter 4: The Impact of Employment Relations and Labour Legislation on an Organisation (Ahmed Cachalia)
4.1 Introduction
4.2 Role-players in employment relations
4.3 The contract of employment and the Basic Conditions of Employment Act
4.4 The grievance procedure
4.5 Discipline management
4.6 The Commission for Conciliation Mediation and Arbitration (CCMA), Labour Court and Labour Appeal Court
4.7 Strikes and lock-outs
4.8 Other important aspects of the Labour Relations Act
4.9 Other important labour legislation that governs and protects the employment relationship
4.10 Conclusion

Chapter 5: Managing People and Teams (Marius Meyer)
5.1 Introduction
5.2 Human relations
5.3 Guidelines for sound human relations
5.4 Conflict
5.5 Teamwork
5.6 Diversity management
5.7 Conclusion

Chapter 6: Engineering Contracts and Law (Marumo Lekoto)
6.1 Introduction
6.2 Obligations, the concepts of contract and requirements for validity
6.3 Performance, personal rights, creditors and debtors
6.4 Agreement
6.5 Circumstances affecting consensus
6.6 Contractual capacity
6.7 Formalities
6.8 Performance must be objectively possible
6.9 The conclusion of the contract, its performance and its object must be lawful
6.10 The parties to a contract, parties commonly associated with engineering and construction contracts
6.11 Terms of a contract
6.12 Interpretation of contracts
6.13 Breach of contract
6.14 Remedies for breach of contract
6.15 The transfer and termination of obligations arising from a contract
6.16 Differentiating between the contract for the letting and hiring of work, and the contract for the letting and hiring of services

Chapter 7: Operations Management (David Kruger)
7.1 Introduction
7.2 The transformation process
7.3 Manufacturing versus service industries
7.4 Operations design
7.5 Capacity planning
7.6 Flexible manufacturing systems
7.7 Just-in-time (JIT)
7.8 Inventory management
7.9 Productivity improvement

Chapter 8: Total Quality Management (Winton Myers)
8.1 Introduction
8.2 Case study: Granite Rock Company
8.3 The voice of the customer
8.4 Employees involvement in quality improvement
8.5 Continuously strive for zero defect
8.6 Design and build quality into the product
8.7 Focus on the process
8.8 Suppliers are partners in quality
8.9 Quality is free
8.10 The ISO quality system standards

Chapter 9: An Introduction to Safety Management (Carl Marx)
9.1 Introduction
9.2 Theory and concepts
9.3 Safety and the law
9.4 Ethics
9.5 System safety
9.6 Safety audits
9.7 Risk assessment
9.8 Accident investigations
9.9 Accident statistics
9.10 Conclusion

Chapter 10: Maintenance Management (Krige Visser)
10.1 Introduction
10.2 Models in maintenance
10.3 Maintenance planning
10.4 Organising the maintenance resources
10.5 Controlling maintenance performance
10.6 Maintenance approaches and strategies

Chapter 11: Marketing and Diffusion of Innovation (Wilhelm Nel)
11.1 Introduction
11.2 The role of marketing
11.3 The role of technical people in the marketing process
11.4 Customer satisfaction and profitable customer relationships
11.5 Marketing principles
11.6 Product life cycles
11.7 Marketing new products
11.8 The consumer decision-making process
11.9 Conclusion

Chapter 12: The Engineer, User of Information and Communication Systems (Wilhelm Nel)
12.1 Introduction
12.2 Data, information and knowledge
12.3 Information needs and responsibilities
12.4 Information systems
12.5 Uses, advantages and disadvantages of information systems
12.6 IT in design and product development
12.7 IT in production and manufacturing
12.8 ICT in engineering management
12.9 E-business
12.10 Conclusion

Chapter 13: Principles of Project Management (Ad Sparrius)
13.1 Introduction
13.2 What is a project?
13.3 Project stakeholders
13.4 The project life cycle
13.5 Integrative management
13.6 The work breakdown structure as a consolidated management framework
13.7 Project time management

Chapter 14: Introduction to Accounting, Economics, Financial Management and Budgeting (Wilhelm Nel)
14.1 Introduction
14.2 Macroeconomics and microeconomics
14.3 Valuation and wealth creation
14.4 Utilising resources
14.5 What goods and how many should be produced?
14.6 The difference between management accounting and financial accounting
14.7 Financial statements
14.8 Profit and cash flow
14.9 Budgeting

**Chapter 15: Cost Estimating, Cost Engineering and Cost Management (Wilhelm Nel)**

15.1 Introduction
15.2 The nature of costs
15.3 Cost-volume-profit (CVP) analysis
15.4 Cost estimating and cost evaluation
15.5 Capital cost estimating methods
15.6 Learning curves and (labour) cost estimating
15.7 Pricing

**Chapter 16: Time Value of Money and Project Selection (Wilhelm Nel)**

16.1 Introduction
16.2 Interest and the time value of money concept
16.3 Project selection
16.4 The selection of new product development projects

**Chapter 17: Business and Technology Strategy (Jannie Lourens)**

17.1 The role of the scientist, technologist or engineer in strategic management
17.2 What is strategic management?
17.3 Strategy
17.4 Strategic management
17.5 Strategic planning and strategic thinking
17.6 Strategic planning model

**Chapter 18: Managing Technology and Innovation (Wilhelm Nel)**

18.1 Introduction and the role of innovation
18.2 Defining technology management
18.3 How technologies and industries evolve
18.4 Technology strategy
18.5 The innovative organisation
18.6 Developing new products
18.7 Managing knowledge and intellectual property

19.1 Introduction
19.2 Sustainability concerns and the move towards Sustainable Development
19.3 Sustainable Development and its influence on business and industry
19.4 Changes in business practices towards meeting the sustainability challenge
19.5 The importance of ISO 14000 and EMS standards for normal management practices
19.6 Environmental auditing
19.7 Environmental accounting
19.8 Environmental risk assessment
19.9 Life cycle assessment
19.10 Life cycle engineering
19.11 EIA as the only mandatory tool under environmental legislation
19.12 Corporation and sector technology strategies to address current and future sustainability challenges
19.13 Funding opportunities for sustainability-orientated technologies

**Chapter 20: Entrepreneurship (Jopie Coetzee)**

20.1 Introduction
20.2 What is an entrepreneur?
20.3 New business opportunities
20.4 Forms of business ownership and modalities of start-up
20.5 Legal considerations for a new venture
20.6 Source of finance
20.7 The business plan
20.8 Starting up a new business venture
20.9 The business network in South Africa

**Chapter 21: Ethics for Engineering Professionals (Martin Prozesky)**

21.1 Introduction
21.2 Ethics for multicultural societies and workplaces
21.3 Why be ethical?
21.4 Workplace ethics
21.5 Professional ethics for engineers and others who work with them
21.6 Ethics in engineering
21.7 Skills for handling dilemmas

Index

Of Interest and Benefit to:

The environment in which technical people work
Management of technology and innovation
Human resource management
Management of employment relations and related labour legislation
Marketing and diffusion of innovation
Engineering contracts and law
Operations management
Safety management
Project management and evaluation
Basic accounting, economics and financial management
Techno-entrepreneurship
Managing people and teams
Total quality management
Maintenance management
Budgeting and cost engineering
Business and technology strategy
Managing the environment and sustainable development
